Diagnostic Exercise
From The Davis-Thompson Foundation*

Case #: 144  Month: May  Year: 2020

Contributors: Fábio S. Mendonça, DVM, MSc, PhD, Laboratory of Animal Diagnosis, Federal Rural University of Pernambuco. Janet Moore, BVSc, and Francisco A. Uzal, DVM, MSc, PhD, DACVP, California Animal Health and Food Safety Laboratory System, San Bernardino Branch, University of California – Davis.

Clinical History: A 14-year-old Warmblood gelding was admitted to the hospital with a 4-day history of colic and dehydration. The horse was treated with intravenous fluids, gentamicin and flunixin meglumine, but died soon after.

Gross and Microscopic Findings:

Figure 1
Follow up Questions: Gross and microscopic description, morphologic diagnosis (gross and microscopic), and three possible etiologies.

The Diagnostic Exercises are an initiative of the Latin Comparative Pathology Group (LCPG), the Latin American subdivision of The Davis-Thompson Foundation. These exercises are contributed by members and non-members from any country of residence. Consider submitting an exercise! A final document containing this material with answers and a brief discussion will be posted on the CL Davis website http://www.clldavis.org/diagnostic_exercises.html Editorial Committee.

Associate Editor for this Diagnostic Exercise: Francisco Uzal
